CC and flanked the human CTLA-4 locus were cloned and sequenced. The CC sequence data was assembled into a contiguous sequence that is presented CC in AAA95363-68. AAA95363-68 comprise BAC clone 22700, and AAA96365-68 CC microsatellite repeat (PMR) sequences contain polymorphic method for determining the predisposition of a human subject to develop CC cD28, ICOS gene or CTLA4 gene of the human costimulatory receptor gene CC locus (hCGRL). PMR sequences vary in length among individuals and can be detected by rapid and convenient high resolution processes. The method is useful for determining the predisposition of a human subject to develop CC cD28, ICOS gene or CTLA4 gene of the human costimulatory receptor gene CC amplified to generate products that differ in size. These products can be detected by rapid and convenient high resolution processes. The CC method is useful for determining the predisposition of insulin-dependent CC diabetes mellitus (IDDM), Addison's disease, Graves disease, autoimmune
                                                                                                                                                                                                                                                                              Determining predisposition of humans to develop autoimmune disease involves detecting polymorphic microsatellite repeat sequence within human costimulatory receptor gene locus

```
The invention relates to isolated nucleic acid molecules and their CC encoded secreted proteins. The nucleic acids and proteins are used to grevent, treat or ameliorate a medical condition in e.g. humans, mice, CC to a pathological condition. Antibodies to the proteins can also used in alleviating symptoms associated with the disorders and in CC immunosorbant assays (ELISA). Disorders which are disprosed or treated cardiovascular disorders e.g. reducionamnoassays or enzyme linked CC hyperproliferative disorders e.g. remanatoid arrhritis, CC and coular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cardiac arrest, cerebrovascular disorders e.g.

                                                                                                                                                                                                                                                                                                       AAN71109;
                                                                                                                                                                                                                                                                                                               AAN71109 standard; DNA; 3659 BP.
                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a recombinant DNA autonomously replicable in cells of coryneform bacteria (CB), comprising a DNA sequence coding for an aspartokinase (AK) in which feedback inhibition adhydrodipicolinate reductase (DHPR), a DNA sequence coding for dimydropicolinate synthase (DHPR), a DNA sequence coding for diminopimelate decarboxylase (DHPS), a DNA sequence coding for aspartate aminotransferase (AAT). The present sequence coding for appresent invention, can be used for improving L-lysine products from the by CB. The L-lysine produced can be used as a fodder additive.
                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1331 BP; 330 A; 340 C; 350 G; 311 T; 0 other;

                                                             Sequence 3776 BP;
                                                                Novel EPH-related PTK cDNA clone Cek9 (given in AAQ90655) was isolated from a chick embryo library in lambda. Cek9 protein (AAR75707) is closely related to Cek5 (AAR75712). In adult tis Cek9 expression is predominant in the thymus and detectable in brain, retin, kidney, lung and heart.

                                                                                                                                                                                                                                  A computer readable medium has been developed which has recorded on it 982 nucleotide sequences isolated from the Enterococcus faecalis genome. AAX12938 to AAX13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosting Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                           New isolated nucleic a
genes from Drosophila

AL Submitted (20'-MAR-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquirles: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk Puring sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations to the overlapping clone assembly data is compared from overlapping clones. Variation annotation may not be found in the sequence wariations corresponding to the overlapping clone, as we submit sequence with a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate

**NOTE: This is a 'working draff' sequence. It currently
consists of 4 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Galagan, J., Gardyna, S., Grant, G., Hagos, B., Heaford, A., Horton, L., Howland, J.C., Johnson, R., Jones, C., Kann, L., Karatas, A., Klein, J., Lehozak, J., Lieu, C., Locke, K., Macdonald, P., Marquis, N., McEwan, P., McGurk, A., McKernan, K., McLaughlin, J., Meldrim, J., Morrow, J., Naylor, J., Norman, C.H., O'Connor, T., O'Donnell, P., Peterson, K., Pollara, V., Riley, R., Roy, A., Santos, R., Severy, P., Stange-Thomann, N., Stojanovic, N., Subramanian, A., Talamas, J., Tesfaye, S., Tirell, A., Vassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Wassiliev, H., Wassiliev, H., Vo, A., Wassiliev, H., Wassiliev, H., Vo, A., Wassiliev, H., Wassiliev

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   BG
